CV Brake Pad and Disc Catalogue

- Premium brake pads
- Carbon upgrade
- Comprehensive range
- ECE R90 approved
- Complete range of wear lead kits
- 40 year history
- British made quality products

What makes EBC/EFI CV pads the best aftermarket choice ever?

EBC/EFI CV pads are British made from premium CV materials that are designed for maximum mileage and minimum disc abrasion. In this relatively new market place where almost all newly registered trucks and trailers now use DISC SYSTEMS the high quality necessary to provide safe braking without pad de-bonds short life or disc damage is the key motivation to EBC/EFI materials and processing. Here are the three compelling reasons to use EBC/EFI.

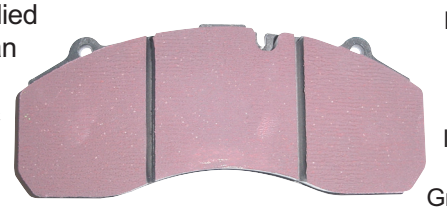

1. ***Interlayer technology***
   EBC/EFI have developed a SHOCK RESISTANT high strength interlayer that not only resists corrosion but reduces transmissions of shock and prevents pad de-bonds.

2. ***Pre-moulded expansion grooves***
   EBC/EFI mould the expansion grooves into the pad material whilst hot moulding. This reduces edge stresses at the pad to plate interface and prevents edge lifting whilst also giving the advantage of reducing surface cracks.

3. ***Brake-In✓™ Coating***
   All EBC/EFI CV pads now carry the revolutionary Brake-In™ coating which is a heat applied plastic abrasive layer that guarantees an instant high efficiency brake from first installation and helps condition the disc surface during the first few hundred miles of pad use. This coating process enables vehicles to pass vehicle inspection immediately after new pads have been fitted and is a major advantage to fleet users working to a time schedule or carrying perishable goods.

Filiale du groupe Freeman Automotive, EFI est spécialisée dans la fabrication de plaquettes de freins. C'est sa grande connaissance dans le domaine de la friction qui permet à EFI de vous apporter aujourd'hui la plus importante gamme du marché de la rechange. Composée de plus de 250 références de plaquettes de freins elle est spécialement élaborée pour les véhicules industriels. Fabriqués en Angleterre dans des usines certifiées ISO 9001, ces produits répondent à la norme R90. Dans le seul but d'améliorer votre sécurité EFI a su mettre au point de nouveaux procédés de fabrication exclusifs.

Baptisée INTERLAYER la première innovation consiste à intercaler une sous-couche entre le support et la friction ce qui permet:
- de supprimer le risque de décollage en limitant la corrosion du support.
- offre une plus grande résistance à l'effort de cisaillement lors du freinage.
- supprime les vibrations.

La seconde permet d'améliorer l'homogénéité de la friction des plaquettes de grandes dimensions en supprimant l'opération d'usinage des rainures de dépoussiérage à l'aide d'une scie. Celles ci sont désormais directement obtenues par moulage à chaud. Les fibres n'étant plus sectionnées les contraintes sont mieux réparties et le risque de décollage des extrémités éliminé. Ce procédé permet également de limiter l'apparition de fissures sur la surface de friction

La dernière nouveauté nommée BRAKE-IN consiste à l'application sur la surface de friction d'une couche plastifiée contenant des abrasifs. Ce procédé permet de limiter le temps de rodage en gommant les petites imperfections de la surface du disque. Grâce à BRAKE-IN l'efficacité est immédiate, la sécurité de l'utilisateur est assurée et le risque de refus au control obligatoire éliminé. Freeman Automotive possède et distribue également les plaquettes de freins EBC Brakes. C'est EBC Brakes qui assure la distribution de EFI en Europe.

EBC/EFi's new CV brake disc range is designed to provide an OEM quality product at aftermarket pricing with an extremely high quality, availability rate and fast delivery.

Professional fleet operators will appreciate the benefits of this high quality product which is geared to extend fleet service miles between disc changes. These discs have been extensively dyno tested with EBC/EFI's own CV disc pads and are compatible with any OEM or quality aftermarket friction.

The labour and down time costs of replacing discs on heavier trucks is a major consideration when selecting appropriate disc suppliers. EBC/EFI consider themselves to be at the forefront of the premium CV Pad market in Europe and firmly intend to use this same philosophy of quality, service and availability to take the lead in the brake disc market.

See contents page for explanations of pad materials available. All pad illustrations are to scale at 20% full size.
Manufacturer's names & part numbers are used in this catalogue for cross reference purposes only. All parts offered for sale in this catalogue are made by European Friction Industries or its approved sub-contractors and are NOT original parts.

Industrial Applications

Friction Material Selection

KS	Premium off-highway material. Medium friction level (μ=0.32) with excellent wear properties in most off-highway environments.
KT	Original equipment quality off-highway material. Medium friction (μ=0.32) with exceptional wear properties. Used on popular OE off-highway vehicles.
KX	Medium - high friction heavy duty material (μ=0.38) which is approved on many tram and light rail applications. Excellent pad and disc wear characteristics.
LJ	Premium off-highway material. Medium friction level (μ=0.32) with excellent wear properties. Particularly suited to hot, dry and dusty environments.
LU	Premium off-highway material. Medium friction level (μ=0.32) with excellent wear properties. Particularly suited to deep mud and slurry environments.
LW	A high friction material (μ=0.48) with excellent static friction properties - recommended for industrial hand brake applications.
NH	Medium - high friction heavy duty material (μ=0.40) with excellent static friction properties - recommended for heavy duty industrial hand brake applications.
Sintered	High friction heavy duty material (μ=0.55). Material of choice in high energy applications. The advantages of sintered linings include superior performance, improved fade resistance, extended life and in many instances, allow for the utilization of compacy, more efficient braking systems.

RAILWAY, LIGHT RAIL AND TRANSIT PRODUCTS

The heavy division of Freeman Automotive is European Friction Industries who are a British manufacturer of Disc Braking products and is based in Bristol, UK.

The Company has a large rail market for disc brake pads and continues to develop materials for railway and transit vehicles of all types. The Company occupies two sites in Bristol, one for manufacturing and Research & Development, the other for warehousing and worldwide distribution.

The equipment and techniques operating in the factory include modern mixing, moulding and machining facilities, under comprehensive manufacturing and quality management controls. European Friction Industries is a top rated supplier to many prestigious companies worldwide, and is registered to ISO 9001 by the British Standards Institute.

With extensive research and development facilities available, new friction material products and applications are continually investigated. In particular, several test dynamometers provide vital performance information to match customer's specific requirements. For railway testing, the R & D Department is equipped with a full-scale test dynamometer, which can simulate most of the known braking conditions met by the world's railways.

In the demanding and competitive world of friction materials, where quality, performance and safety are paramount to the customer, European Friction Industries offer total support for its products, from development and performance testing, to packaging and delivery scheduling, and with service monitoring and advice.

Research and Development

At European Friction Industries we understand that one material does not suit all applications of the same reference, and that the individual operating requirements, rolling stock variations, local regulations etc. all have an effect on the choice of material we would recommend.

We will if necessary run dynamometer tests before recommending any material, and if necessary develop a new material for each application.

The European Friction Industries dynamometer is able to test both disc brake pads and brake blocks (shoes) to international and national specifications, as well as to individual route simulations.

The basic dynamometer capabilities are:

Disc pads

Maximum Speed: -	350 kph
Maximum axle load: -	20 tonnes
Maximum pad load: -	65 kN

Brake blocks

Maximum Speed: -	190 kph
Maximum axle load: -	30 tonnes
Maximum block load: -	75 kN

All pad illustrations are to scale at 30% full size.

Friction Material Selection

Sales Code	Material	Friction	Description
KX	**E308**	μ = 0.38	Medium/high friction, semi-conformable pad material for light rail and suburban train disc brakes. Exceptionally good wear and disc conditioning properties. In wide use in the UK.
MH	**E349**	μ = 0.33	Medium/low friction, semi-conformable pad, primarily for rapid transit and metro vehicles subject to frequent braking and high disc temperatures.
MP	**E352A**	μ = 0.35	Medium friction pad material for use on light rail and trams. Very good pressure stability over a wide operating range. Designed for the higher pressre motor applications.
MV	**E359**	μ = 0.35	Medium friction pad material for use on light rail and trams. Meets OE requirements for friction stability and low wear rates at operating temperatures up to 400°C.
NG	**E368**	μ = 0.42	High friction, semi-conformable pad material for light rail and suburban train disc brakes.
QB	**E400**	μ = 0.38	Ecobrake; Medium/high friction, highly conformable pad suitable for light rail and suburban train disc brakes. Exceptionally good wear and disc conditioning properties. Eco-friendly formulation utilising resins and fibres from renewable sources and containing no heavy metals.

All pad illustrations are to scale at 30% full size.
Manufacturer's names & part numbers are used in this catalogue for cross reference purposes only. All parts offered for sale in this catalogue are made by European Friction Industries or its approved sub-contractors and are NOT original parts.

MATERIAL: - E308

E308 is an organic moulded friction material designed for use in disc braking of railway vehicles operating at speeds of up to 140km/h.

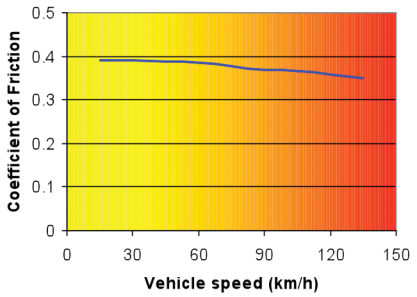

The material contains no asbestos, heavy metals or other compounds with known environmental hazards, and has found successful application primarily on rapid transit, underground and Metro systems demanding frequent braking with high rates of retardation and high disc temperatures.

Tyne and Wear Metro Unit

Approvals/Fitment

Tyne and Wear Metro – UK
Docklands Light Railway – UK
CIE Mk III passenger coaches – Ireland
DART – Dublin – Ireland
Midland Metro – Birmingham - UK
Class 313 – UK
RET – Rotterdam – Netherlands
Bern SVB – Bern - Switzerland

E 308 Friction values with speed

In these applications **E308** exhibits a stable coefficient of friction, with a mean value of 0.38, over a range of operating conditions and temperatures. The material contains no hard abrasives resulting in an extremely low wear rate of the pad.

PHYSICAL PROPERTIES

Typical values	
Mean density	2.15 g/cm³
Rockwell hardness	34.0 RHM
Compression modulus	80.0 kN/cm²
Ult. flexural strength	28.0 kN/cm²
Min. Shear strength	450 N/cm²

All pad illustrations are to scale at 30% full size.
Manufacturer's names & part numbers are used in this catalogue for cross reference purposes only. All parts offered for sale in this catalogue are made by European Friction Industries or its approved sub-contractors and are NOT original parts.

MATERIAL: - E349

E349 is an organic moulded friction material, designed for use in disc braking of railway vehicles operating at speeds up to 140km/h.

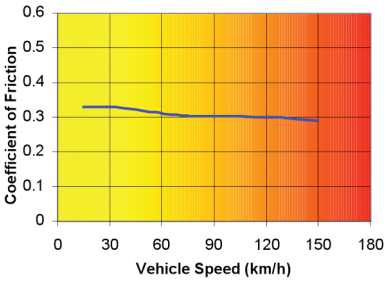

The material contains no asbestos, heavy metals or other compounds with known environmental hazards, and has found successful application primarily on rapid transit, underground and Metro systems demanding frequent braking with high rates of retardation and high disc temperatures.

WMATA Metro Unit

Approvals/Fitment

WMATA – USA
Sacramento RTD – USA
De Lijn – Ostende – Belgium
RET – Rotterdam – Netherlands

E 349 Friction values with speed

In these applications **E349** exhibits a stable coefficient of friction, with a mean value of 0.31, over a range of operating conditions and temperatures. The material contains no hard abrasives resulting in an extremely low wear rate of the pad.

PHYSICAL PROPERTIES

Typical values	
Mean density	2.15 g/cm³
Rockwell hardness	34.0 RHM
Compression modulus	80.0 kN/cm²
Ult. flexural strength	28.0 kN/cm²
Min. Shear strength	450 N/cm²

All pad illustrations are to scale at 30% full size.
Manufacturer's names & part numbers are used in this catalogue for cross reference purposes only. All parts offered for sale in this catalogue are made by European Friction Industries or its approved sub-contractors and are NOT original parts.

MATERIAL: - E352A

E352A is an 'Asbestos Free' material developed as a disc brake pad material for use in CV and PSV applications.

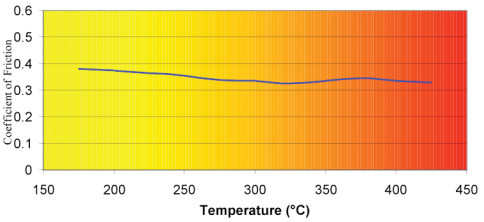

The coefficient of friction (≒) is very stable over a wide temperature range. This material overcomes the major problems associated with high operating temperatures created by demanding CV and PSV operation.

Midland Metro Unit

Approvals/Fitment

Midland Metro - Birmingham - UK

E 352A Friction values with Temperature

In these applications **E352A** exhibits a stable coefficient of friction, with a mean value of 0.35, over a range of operating conditions and temperatures. The material contains no hard abrasives resulting in an extremely low wear rate of both the pad material, and the disc.

PHYSICAL PROPERTIES

Typical values	
Mean density	3.00 g/cm³
Rockwell hardness	54.0 RHM
Compression modulus	90.0 kN/cm²
Ult. flexural strength	27.0 kN/cm²
Min. Shear strength	450 N/cm²

All pad illustrations are to scale at 30% full size.
Manufacturer's names & part numbers are used in this catalogue for cross reference purposes only. All parts offered for sale in this catalogue are made by European Friction Industries or its approved sub-contractors and are NOT original parts.

MATERIAL: - E359

E359 is an asbestos free material developed as a disc brake pad material for use in Tram applications.

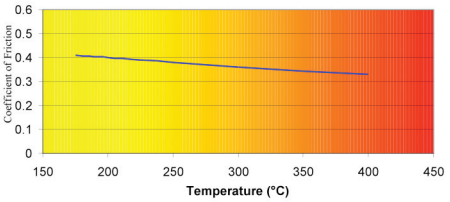

The coefficient of friction (≒) is very stable over a wide temperature range. This material overcomes the major problems associated with the high operating temperatures created by demanding Tram operation.

Leipzig Tram - Bombardier Unit

Approvals/Fitment

Bombardier – NGT8D – Leipzig & Rostock (Bolero)

E 359 Friction values with Temperature

In these applications **E359** exhibits a stable coefficient of friction, with a mean value of 0.35, over a range of operating conditions and temperatures. The material was developed to give an extremely low wear rate of the pad material.

PHYSICAL PROPERTIES

Typical values	
Mean density	2.90 g/cm³
Rockwell hardness	34 RHM
Compression modulus	50 kN/cm²
Ult. flexural strength	28 kN/cm²
Min. Shear strength	450 N/cm²

All pad illustrations are to scale at 30% full size.
Manufacturer's names & part numbers are used in this catalogue for cross reference purposes only. All parts offered for sale in this catalogue are made by European Friction Industries or its approved sub-contractors and are NOT original parts.

MATERIAL: - E368

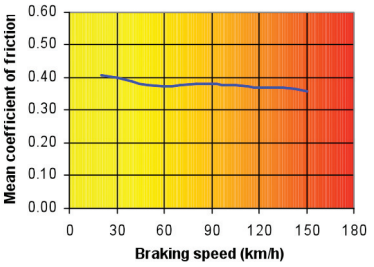

E368 is an organic moulded friction material, designed for use in disc braking of railway vehicles operating at speeds up to 140km/h. The material contains no asbestos, heavy metals or other compounds with known environmental hazards, and has found successful application primarily on rapid transit, underground and Metro systems demanding frequent braking with high rates of retardation and high disc temperatures.

Sacramento - CAF Unit

Approvals/Fitment

Siemens US – OE Denver LRV
CAF – OE Sacramento RTD

E 368 Friction values with speed

In these applications **E368** exhibits a stable coefficient of friction, with a mean value of 0.38, over a range of operating conditions and temperatures. The material contains no hard abrasives resulting in an extremely low wear rate.

The material has a light polishing effect on cast iron, SG iron and cast steel discs, and the low modulus value ensures that thermal damage to the disc is minimised.

PHYSICAL PROPERTIES

Typical values	
Mean density	2.30 g/cm³
Rockwell hardness	84 RHM
Compression modulus	40 kN/cm²
Ult. flexural strength	28 kN/cm²
Min. Shear strength	450 N/cm²

All pad illustrations are to scale at 30% full size.

MATERIAL - E400 ECOBRAKE

Ecobrake is an organic moulded friction material designed for use in disc braking of railway vehicles at operating speeds of up to 140km/h.

The material contains no asbestos, heavy metals or other compounds with known environmental hazards and is based on resins and fibres which are obtained from sustainable sources of supply.

E400 nominal friction level

Ecobrake is particularly suited to light rail and Metro applications.
In these applications it exhibits a stable coefficient of friction, with a mean value of 0.38, over a range of operating conditions and temperatures. The material contains no harsh abrasives resulting in an extremely low wear rate of both the pad and the disc. Repeated braking results in a polished disc surface with negligible wear.

The conformable nature of the material minimises hot-spot formation, reducing disc cracking and extending pad life.

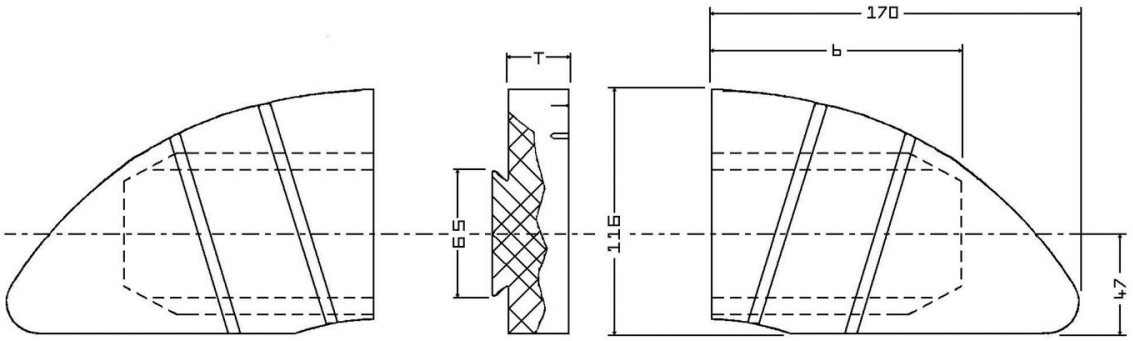

PHYSICAL PROPERTIES

Typical values	
Mean density	2.20 g/cm³
Rockwell hardness	23.0 Rockwell L
Compression modulus	28.0 kN/cm²
Min. Shear strength	350 N/cm²
